

Report and Audit

Complete your data loss prevention with insight

Every security solutions - even the best ones - are one-armed giants without proper reporting and audit features. Hundreds of thousands to multi-millions of activity logs are impossible to use and analyze efficiently without highly flexible, easy-to-setup reporting solutions with prebuilt report and audit templates to make log processing transparent, automated, schedule-able, fast and accurate. Considering that in case of a security investigation, reports made out of logs are the only available to prove one's innocence or guilt, reliability is definitely with one of the highest importance of all data loss prevention features. While DLP logs may prove the guilt of the perpetrator, it helps to separate malicious intentions from accidental actions, the harmful perpetrator from the large amount of loyal and truthful users without even letting the shadow of suspicion lay on them. And this is important!

Freely set activity reports

Finding a specific event, access, or action to a file by a given user on a device or devices or even-network-wide out of usually millions of log lines is impossible without sorting it somehow either manually or automatically. Grayteq DLP's reporting engine built in Security Orchestrator is powerful enough to make manual sorting of even the ever changing real-time logs or the chain of as-long-as-you-please-in-time log archives for a specifically required result. Simply drag your angle of sorting interest on the SO over the logs and sorting immediately happens for as deep as your wish.

Automate your reports

Automated and scheduled setups for the provision of recurring and same angled reports is also part of the Grayteq DLP Report & Audit feature that makes it possible to read the same content, timely updated and automatically created, board-ready reports. And for the head of IT security, there is no more calming than reading professionally gathered reports every morning while drinking the day-starting coffee that ensures if no unhandled or worth to mention security breach has occurred since the last automated report.

Key Advantages

Evidential and Safe

- Create evidential reports using any viewpoints that pinpoint malicious activities and protect the innocent! Saving loyal and rule-abiding users from being accused is as important and finding the harmful ones.

Accurate and Reliable

- "Trust with your paycheck" on the report content. It will contain everything as it happened. In making reports, it's vital to make sure that there is no possibility to forge evidence about an action that did not happen, or delete about an action that did happen.

Automated and easy to use

- Automated, scheduled and easy to use, analyze, explain and understand. These are the properties of a well-made report.

Manual vs Automatic

- Setup various automated reports and schedule to execute recurrently, or "click-off" a manual one using a prebuilt report template or a live one with modifications is also a slight walk in the park.

Grayteq DLP Features

 DLP Monitor

 Rights Management

 Data Quarantine

 App Management

 Endpoint Protection

 Encryption for DLP

 Intrusion Prevention

 Report & Audit

File Audit

Grayteq DLP File Audit feature is a one-of-a-kind set of features that enables organization's IT security professionals commence file audits from various angles, time-schedules, required results. By making purpose-built reports from either real-time logs or even from archives are essentials and by Grayteq DLP File Audit's preset reporting schemes, it's a single-click solution.

File Audit features

- Standard File Audit about a file**
 Select a log entry and click Standard File Audit and Grayteq DLP automatically creates a tree-structured overview about what has happened to the file named in the log since the moment of the log till the current moment.
- Standard File Audit about a file from its creation**
 Select a log entry and click Standard File Audit from Creation and Grayteq DLP automatically creates a tree-structured overview about what has happened to the file named in the log since the moment of it'd creation till the current moment.
- Seek file origin**
 You can find the very origin of the selected file back in time as long as it appears Grayteq logs.
- Seek file origin and generate Standard Audit Report**
 Find the very first existence of the selected file in Grayteq logs and draw its whole lifecycle in a report.
- File existence history about a file**
 Find all storage location in your network, where the specific file exists.

Storage Audit

Besides of file audits, making reports of your corporate storages, where your sensitive data is brought by, who put these data to removable medias and moved from one location, from one device, from one subsystem to an other is also a must to properly follow-up with your data. Grayteq DLP's name, mount-point, serial and hardware ID based storage identification system allows you to create these storage usage audits in seconds, even at the absence of the specific device.

Storage Audit features

- Storage Connectivity Report**
 Get all available log information about when and in which devices the specific storage device was connected. This report shows the time of connection and removal, the host name where the storage device was connected to and its current connection state (eg. If the storage device is currently connected to any Grayteq protected hosts)
- File Operation Report**
 File Operation Report shows what file operations occurred during the selected connection session in details.

Supported Windows operating systems

Grayteq DLP supports both 32- and 64-bit Microsoft Windows Desktop and Server operating system.

Desktop operating systems

- Windows 8.1
- Windows 10
- Windows 11

Server operating systems

- Windows Server 2012 R2
- Windows Server 2016
- Windows Server 2019
- Windows Server 2022

Get started

Grayteq data protection expert team will work with you to understand your unique data security requirements, help you define priorities and share industry best practices.

About us

Grayteq was born from a firm commitment to provide superior data security products to companies and people all over the world. Since its inception, our company has passed down and expanded on its traditional strengths as an IT security software manufacturing company. Grayteq's approach to data loss prevention massively differs from any other data loss prevention manufacturers' approach in numerous aspects. Our slogan well represents our way of thinking about data loss and applicable prevention measures to stop it.
